

BARLEY BOSS

FOR LOW ORGANIC, HIGH NUTRIENT LAKES

AVAILABLE IN A 40 LB BAG

DOES YOUR LAKE FORM UNSIGHTLY SCUMS, ESPECIALLY NEAR THE SHORELINE?

Micro-Lyfe Barley Boss contains weed-free barley straw and natural peats that capture and bind excessive nutrients. These pellets are rich in humic acids, which are capable of chelating harmful metals. After it breaks down, Micro-Lyfe Barley Boss becomes part of the lake's substrate in the form of peat. Since peat is a natural buffer, continued use prevents large pH swings.

Unlike some other barley products, Micro-Lyfe Barley Boss does not contain wheat, corn, or other binders that can actually increase nutrients in your lake.

DIRECTIONS:

Apply BARLEY BOSS at a rate of 120 pounds per treatment acre every 2 months scattering the pellets very close along the shoreline in shallow water.

If any copper based algaecides, herbicides, Hydrothol 191 or peroxide products are used to kill algae or aquatic weeds, apply Micro-Lyfe Barley Boss at least 72 hours before or 72 hours after those applications.

- 1 Contains peat, humates and concentrated barley
- 2 Helps buffer and reduce pH swings
- 3 Active ingredients go to work immediately after application
- 4 Slow release pellet maintains optimal concentration over time
- 5 Begin treatments in early spring
- 6 Recommended for use with Blue Power

CAUTION:

- Keep out of reach of children
- Do not use internally
- If contact is made with open wounds, wash with soap and water
