

DIGESTER

ASSISTS IN THE BREAKDOWN OF HEAVY BOTTOM SOLIDS

AVAILABLE IN A 25 LB PAIL WITH 50 8OZ. PACKS

IS YOUR LAKE SURROUNDED BY TREES?

If your lake is receiving a lot of leaves, needles, or other plant material, you need Micro-Lyfe Digester, microbiology in a bag! Micro-Lyfe Digester contains spore-based bacteria and enzymes in water soluble packets for mess-free ease of use.

This consortium is specially formulated to biodegrade hard-to-digest plant material like leaves. If you have trees surrounding your lake, you should be tossing in packets of Micro-Lyfe Digester as part of your Micro-Lyfe Concentrate or Micro-Lyfe Complete program.

DIRECTIONS:

Treatment rate is one pail per surface acre per year.

For the initial treatment, use 10 packets per surface acre weekly for 3 weeks followed by 2 monthly treatments of 10 packs each.

Toss packets into water at various points along the shoreline. Packet will dissolve to release material into water.

If any copper based algaecides, herbicides, Hydrothol 191 or peroxide products are used to treat algae or aquatic weeds apply Micro-Lyfe Digester at least 72 hours before or 72 hours after those applications.

- 1 Metabolizes and reduces bottom organic detritus
- 2 For sediments with high levels of leafy and woody plant material
- 3 Contains cellulase enzymes for digesting difficult lignins
- 4 1,362 billion sludge degrading bacteria per pound
- 5 Water soluble packets for year round, no-mess application
- 6 Best when used with Micro-Lyfe Complete, Concentrate, or Sludge Clear

CAUTION:

- Keep out of reach of children
- Do not use internally
- If contact is made with open wounds, wash with soap and water
