AQUATIC MIDGE FLIES

Are swarms of bugs keeping you inside?

Aquatic midge flies are non-biting insects found in lakes and ponds, and are known by many common names including blind mosquito and fuzzy bill. They do not bite, suck blood, or carry disease like true mosquitoes do, so they are more of a nuisance than anything.

Midge flies are a food source for other aquatic insects, such as dragon fly nymphs and several varieties of fish, so the goal is not to completely eliminate them, but to keep them in proper balance within the ecosystem.

Midge fly populations grow exponentially in water that is high in nutrients and bottom muck, and low in oxygen, environments that don't support fish.

- Swarms tend to be worse in the spring and early fall
- At night they are attracted to lights around houses and businesses
- Outdoor activity can be difficult as swarming midges can be inhaled into the mouth and nose and get into eyes and ears
- Swarms fly to cool shady areas & stain paint, stucco, roofs, cars, etc.
- Small & large pond and lakes, whether natural or man-made
- Larvae live on and in the lake bottom making them more difficult to control and to detect imminent adult swarming

What can be done about them?

Shorter term control with fast results includes applying larvacides to the lake to prevent midge flies from developing into flying adults.

For longer term control, you need to improve the water quality of the lake. As lakes age, many develop layers of organic bottom muck that dramatically lowers dissolved oxygen levels favoring growth of midge fly larvae while preventing fish and other insect predators from feeding on them. Infested lakes can easily support populations of 2,000 larvae per square meter.

Lakes low in oxygen and high in nutrients, pollution and algae are a perfect habitat for midges. The most effective long term remedy for midge flies may be installing an aeration system to raise oxygen levels and improve overall water quality.

Whatever your pond issues are, Vertex Water Features Aeration and Micro-Lyte products can help improve the health of your pond or lake.
