This information will help speed the process to design the best aeration system. Use this sheet to gather information. Its OK if you can’t fill it all in. Email to info@vertexwaterfeatures or fill out the online form www.vertexwaterfeatures.com/form/aerial-map-form

Name: ____________________________
Phone: ____________________________ or Email: ____________________________

POND/LAKE
1. Total Acre Feet and Volume
   We’ll calculate: Address: ____________________________
   OR Coordinates: Latitude ______ Longitude ______
   AND Average Depth: ____________________________

   Or you do it: Diameter: ____________________________
   OR LxW in Feet: Length ______ Width ______
   OR Surface Acres: ____________________________
   AND Average Depth: ____________________________

   Then use the calculators www.vertexwaterfeatures.com/aeration/lake-surface-area-volume-calculator with the measurement(s) above to determine the following:
   Total Acre Feet: ____________________________
   Volume: ____________________________

2. Maximum Depth: ____________________________
3. Slope: ____________________________
4. Inflow/Outflow: ____________________________

POWER SOURCE
1. Choose one: 115V  230V
2. Distance from power source to waters edge in feet: ______
   (if it is a great distance you may need the remote valve box option)
3. General location: ____________________________
   (if it is close to windows or frequent activity you may want the sound kit option)

GENERAL INFORMATION
1. Problems (algae, fish kills, etc.): ____________________________
2. Property type (golf, community, etc.): ____________________________
3. Timeline: ____________________________
4. Budget: ____________________________
